

# Are we Damaging the Planet with all of these new Covid 19 requirements more than we already have?

Before Covid-19 broke out, Ireland and other countries around the world were protesting since we are all in danger of global warming. Suddenly this was all pushed aside. People are forgetting that we were protesting about the overload consumption of using plastic. And now we are using masks with plastic in them, then they are wrapped in plastic wrappers as well and disposable gloves must be worn for regular day to day actively. Latex gloves should ideally be replaced every two hours at minimum to guard against possible unseen punctures. At this rate that means that someone working in a 12-hour shift should be going through 6 pairs of gloves in one day. Don't you think it's weird how people's priorities can change so quickly? One-minute people can be so passionate about something and then act like it's nothing. If we are such extremes of global warming then why we are not prioritising this as an equal to the Covid -19 Crisis? We all need to be more careful in how we dispose our waste and we need to use more reusable masks and wash them. Think about making one little change in your life per day.
