

Climate change

How long until we take for people to realise that climate change is not just a word it is a very REAL problem that's been happening for years and it is still going on ?

climate change is effecting the world every day and nobody is realising how bad it is getting . “the weather is bi-polar these days”, is a very common thing people say these days, you probably have heard it a lot lately...

Do you know the reason why the weather is changing a lot lately ?
CLIMATE CHANGE!!!!!!

But... What is climate change?

It is a long term change to the weather and temperature. The last couple of years we have had significant changes to the weather, for example, snow in march, rain a chunk of the summer and heatwaves in September. This is all due to climate change. This has been since the 1800s due to human activities, all over the world! Not just Ireland.

Climate change can vairey from intense droughts to horrendous storms to sunny weather.

E.g. wildfires.

I am sure you are aware of the wildfires that are constantly happening in los angeles.

This is an effect of climate change. How can we put an end to climate change?

We can use less energy in our houses by lowering heating and cooling, switch to use LED bulbs and switching off lights we do not need to be using at that time.

We can also use public transport, cycle or walk.

This will reduce green house gas emissions while also improving your health and fitness. This proves if you help climate change it will

Help you.

Do yourself and the world this favour and use these tips.

We can all change the world together.
